QUALITY & PROJECT DELIVERY

Quality statement

Ocean Vision Energy Limited (OVEL) supports project delivery through coordinated engineering, procurement, construction, logistics and operational services. Quality assurance and quality control support the requirements of our clients.

Start with the requirement

Technical specifications, drawings and the agreed scope provide the basis for engineering support, material sourcing and execution coordination.

Connect delivery stages

Our delivery approach covers engineering and planning, procurement and vendor management, construction and installation, testing and commissioning, and operations support.

Support assurance and control

Quality assurance and quality control help connect client specifications with project activities. Our corporate profile identifies the requirements of ISO 9001:2015 as a reference for quality management.

Coordinate technical interfaces

Drawing review, equipment evaluation, vendor coordination and inspection support help keep technical requirements visible as an assignment progresses.

Improve with experience

Our value of continuous improvement calls for each project to leave us more capable. We focus on responsive communication, early problem-solving and dependable coordination.

This statement describes the quality approach in the OceanVision corporate profile. It does not replace contract requirements, approved inspection plans or project-specific acceptance criteria.
